

Retract4 Swing-Away Joystick Arm

The **Retract4** employs a simplicity of design that offers unmatched functionality and durability. Its full 180-degree horizontal adjustment means it can be used for both left-hand and right-hand mounting and multi-position use (straight, right offset, left offset, and fold away). Also allows vertical adjustability for the joystick controller. The easy, low-pressure retractability and positioning allows chair users to get closer to tables and desks—and in and out of the chair more easily. Adaptability for most powerchairs and joystick controllers. Easy installation and virtually no maintenance. Sleek profile for easy cleaning. Full one-year warranty.

The **Retract4 Lite** model is made from plastic composites and aluminum creating a lightweight version of the original Retract4. *Note: the Retract4 Lite does not have a tension adjustment at each swivel point of the arm.*

Midline option can be added to either the Retract4 or the Retract4 Lite. The 12" midline bar attaches to the second swivel point on the arm and includes a mount for the joystick adapter. Adapter mount includes two set screws and can be adjusted horizontally on the bar's channel. A Tray Spacer is also available for an additional 3" of clearance over tray.

Retract4 with Midline

EXTENDED

RETRACTING

FOLDED

Full 180° movement allows arm to have multiple extended positions—straight, offset to left, offset to right—and adjustments. The Retract4 folds at each joint of the arm so that in the folded position it rests completely to the side of the armrest.

Retract4 Swing-Away Joystick Arm

The Retract4 consists of two components: a **swing away arm (determined by the type of powerchair)** and an **adapter (determined by the type of joystick controller)**.

ARMS - RETRACT4

70-JS100
Invacare
($\frac{7}{8}$ " receiver)

70-JS150
Quickie Rhapsody
(fits square receiver)
